**Appendix C** – Written Comments Received and Actions Taken
INTRODUCTION

This report complies with the Disadvantaged Business Enterprise (DBE) rule in Title 49 Code of Federal Regulations Part 26 (49 CFR 26) and details the Arkansas Department of Transportation’s process for setting the Federal Fiscal Years (FFYs) 2020-2022 overall goal for DBE participation in federally assisted transit projects.

Ozark Regional Transit is relying heavily on the State of Arkansas’ DBE program to assist in creating and developing its 2020-2022 DBE goals and program. Historically, ORT has not expended federal funding at the levels that would require a DBE goal. ORT’s plans for 2020-2022 include the use of federal funding to the levels that would require goal setting.

49 CFR 26 requires that this goal be submitted for review by the Federal Transit Administration (FTA). This submission must include:

1) A description of the methodology used to establish the goal, including the base figure and evidence with which it was calculated, and the evidence relied on for any adjustments; and

2) A projection of the portions of the overall goal expected to be met through race/gender-conscious measures, respectively; and should include

3) A summary listing of relevant available evidence of disparity and, where applicable, an explanation of why that evidence was not used to adjust the base figure.

NOTICE OF NONDISCRIMINATION Ozark Regional Transit (ORT) complies with all civil rights provisions of federal statutes and related authorities that prohibit discrimination in programs and activities receiving federal financial assistance. Therefore, ORT does not discriminate on the basis of race, sex, color, age, national origin, religion, disability, Limited English Proficiency (LEP), or low-income status in the admission, access to and treatment in the ORT programs and activities, as well as the ORT hiring or employment practices. Complaints of alleged discrimination and inquiries regarding the ORT nondiscrimination policies may be directed to Joel Gardner, Executive Director (ADA/504/Title VI Coordinator), 2423 East Robinson, Springdale, Arkansas, 72764, 479-756-5901, (Voice/TTY 711), or the following email address: ortinformation@ozark.org.

Free language assistance for Limited English Proficient individuals is available upon request. This notice is available from the ADA/504/Title VI Coordinator in large print, on audiotape and in Braille. For any questions or comments contact:

SUMMARY

Proposed DBE Goal for Federal Fiscal Years 2020-2022

Ozark Regional Transit (ORT) proposes the following goal for participation by DBEs on federally assisted transit contracts for FFYs 2020-2022:

Total DBE Goal 1.75%

The data collected provides a detailed listing of contracting opportunities that ORT can seek reimbursement for from FTA in the base year.

The estimated dollar amount of FTA/DOT assisted contracts that ORT expects to award over FFYs 2020-2022 is derived by reviewing base year budget expenditures and the types of contracting opportunities most available for utilization, assuming no growth ($2,900,000 base year, $00.00 subsequent years, $2,900,000 total).

Applying the percentage goal (1.75%) to the total ($2,900,000), ORT has set a dollar goal of expending $50,750 with DBEs during FFYs 2020-2022. ORT has no subrecipients, so a subrecipient goal is not included.

Public Participation Process
Prior to being made available for public comment, a preliminary version of this report was distributed to the ORT Board for their review and comment with an offer to meet and discuss the proposed goal and rationale used to develop the goal. The ORT Board consists of representatives from the four major cities we serve with fixed route public transit and the four counties we serve with both Urban and Rural transit services. All 292 Arkansas Department of Transportation Certified DBEs have been notified that this report is available and will be provided a copy upon request.

Upon request, this report will be forwarded to minority interest groups with an offer to meet and discuss the proposed goal and rationale used to develop the goal. This report is posted on Ort’s website. A notice, published in the Arkansas Democrat Gazette, La Prenza and Hola Arkansas, informed the public that the proposed goal and its rationale are available for inspection for 30 days following the date of the posting on the ORT’s website (www.ozark.org) or during normal business hours between 8:00 am and 4:30 pm at ORT’s Offices. As provided in the notice, written comments were accepted for 45 days from the date of the posting. ORT received no comments.

49 CFR 26.45.g
(1) In establishing an overall goal, ORT must provide for consultation and publication. This includes:

(i) consultation with minority, women’s and general contractor groups, community organizations, and other officials or organizations which could be expected to have information concerning the availability of disadvantaged and non-disadvantaged businesses, the effects of discrimination on opportunities for DBEs, and ORT’s efforts to establish a level playing field for the participation of DBEs. The consultation must include a scheduled, direct, interactive exchange (e.g., a face-to-face meeting, video conference,
tele-conference) with as many interested stakeholders as possible focused on obtaining information relevant to the goal setting process, and it must occur before ORT is required to submit our methodology to Region VI FTA for review pursuant to paragraph (f) of this section. ORT will document in our goal submission the consultation process we engage in.

(ii) A published notice announcing ORT’s proposed overall goal before submission to Region VI FTA. The notice is posted on our official Internet Web site (www.ozark.org) and may be posted in any other sources (e.g., minority-focused media, trade association publications). If the proposed goal changes following review by Region VI FTA, the revised goal will then be posted on our website (www.ozark.org).

(2) At ORT’s discretion, we may inform the public that the proposed overall goal and its rationale are available for inspection during normal business hours at our principal office (2423 E. Robinson Avenue, Springdale, Arkansas 72764) and for a 30-day comment period. Notice of the comment period must include addresses to which comments may be sent. The public comment period will not extend the deadline set in paragraph (f) of this section.

(3) In an effort to increase consultation with minority, women’s and general contractor groups, annually ORT will invite minority, women’s and general contractor groups to participate in the updating of our DBE methodology. At that time, ORT will also encourage interested groups to begin the DBE Certification process through the Arkansas Department of Transportation. ORT will provide notice of these invitations through our local print media outlets such as the Democrat Gazette, La Prenza and Hola Arkansas. ORT will document the results of this outreach.

Example Announcement:

On [1st Quarter Calendar Year Date], Ozark Regional Transit will conduct a meeting regarding its annual Disadvantaged Business Enterprise participation meeting to comment on or discuss ORT’s methodology, obtain information on becoming a certified DBE through the State of Arkansas, and review ORT’s current DBE Goal. Interested parties may appear in person at: 2423 E. Robinson Avenue, Springdale Arkansas, or register for the conference call at: ortinformation@ozark.org

NOTICE OF NONDISCRIMINATION

Ozark Regional Transit (ORT) complies with all civil rights provisions of federal statutes and related authorities that prohibit discrimination in programs and activities receiving federal financial assistance. Therefore, ORT does not discriminate on the basis of race, sex, color, age, national origin, religion, disability, Limited English Proficiency (LEP), or low-income status in the admission, access to and treatment in the ORT programs and activities, as well as the ORT hiring or employment practices. Complaints of alleged discrimination and inquiries regarding the ORT nondiscrimination policies may be directed to Joel Gardner, Executive Director (ADA/504/Title VI Coordinator), 2423 East Robinson, Springdale, Arkansas, 72764, 479-756-5901, (Voice/TTY 711), or the following email address: ortinformation@ozark.org

DESCRIPTION OF METHODOLOGY

In general, the methodology used to calculate ORT’s FFYs 2020-2022 DBE Goal follows the U.S. Department of Transportation’s Office of Small and Disadvantaged Business Utilization (OSDBU) “Tips for Goal Setting in the DBE Program” (Appendix A) utilizing data obtained from sources listed in Appendix B.
Background Information
ORT administers federally assisted transit programs in Northwest Arkansas, and operates a transit system. ORT provides public transit services directly. ORT has no subrecipients and therefore there are no opportunities as such.

STEP ONE: DEVELOPMENT OF THE BASE GOAL

In Step One (Table 1) of the goal setting process, contractible items were identified and a weighted average was calculated for each item. The Base Goal was then calculated using the relative availability (percentage) (Table 2) of DBEs in Arkansas, through the Arkansas Department of Transportation to perform contracts (both prime and subprime) scheduled for FFYs 2018-2022.

In simplest terms, this percentage, or base goal, can be calculated as follows:

\[
\text{Goal} = \frac{\text{Ready, Willing, and Able DBEs}}{\text{All Firms Ready, Willing, and Able}} = \frac{\text{Relative Availability}}{\text{(DBEs and non-DBEs)}}
\]

To further refine this percentage, weighting was applied using both the percentage of work to be done and the availability of DBEs to perform each work category. This data was obtained using the 2015 Economic Census – County Business Patterns for Arkansas Tables (Six-Digit NAICS Codes) and the Arkansas Unified Disadvantaged Business Enterprise Directory (Table 2). The weight of each category was determined by calculating the relative availability of DBEs in that category against the weight of the contracting funds for each category (Table 3).

The following are the known FTA funding allocations:

<table>
<thead>
<tr>
<th>FFY 2020</th>
<th>5307 Apportioned</th>
<th>$1,400,000</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>5339 Apportioned</td>
<td>$150,000</td>
</tr>
<tr>
<td></td>
<td>5311</td>
<td>$80,000</td>
</tr>
<tr>
<td></td>
<td>5339 Competitive</td>
<td>$2,900,000</td>
</tr>
</tbody>
</table>

In a typical year of operation, ORT does not expend over $250,000 annually in contractible opportunities with federal funds. The historical exception to this will be the opportunity in FFY 2020 with the 5339 Competitive grant that ORT has received to build our Administration Facility. This is the number that is driving our DBE participation in FFY 2020.

| FFY 2021 Est. | 5307 Apportioned | $1,400,000 |
|              | 5339 Apportioned | $150,000   |
|              | 5311             | $80,000    |

In this FFY, ORT will not expect or project to have more than $250,000 in federal contracting opportunities.

| FFY 2022 Est. | 5307 Apportioned | $1,400,000 |
|              | 5339 Apportioned | $150,000   |
|              | 5311             | $80,000    |

In this FFY, ORT will not expect or project to have more than $250,000 in federal contracting opportunities.

</tbody>
</table>
STEP TWO: ADJUSTMENTS

In Step Two of the calculation process, the Step One Base Goal may be adjusted. The factors considered in making adjustments include the past participation and evidence from disparity studies, as well as any other data available that would help to measure the percent of DBE participation in the absence of discrimination. For Federal Fiscal Years 2017-2019, ORT had no contracting opportunities that would have expended more than $250,000 in federal granting funds. No adjustment is reflected in the overall DBE Goal.

Past Participation:

**GOAL-------------------1.75%**

DISPARITY STUDIES AND OTHER EVIDENCE OF DISCRIMINATION

There were no available disparity studies performed within the market area.

Past Race/Gender-Neutral Participation by DBEs on Transit Projects

ORT operates a transit system and is a direct recipient. ORT has no subrecipients. ORT employs approved procurement processes in contracting for services and equipment and in pursuing other contractible opportunities.
ORT consults with the State of Arkansas, Department of Transportation, Public Transit Division to secure technical assistance to increase capacity and availability of DBE providers.

ORT works to encourage and support contractors in increasing DBE participation, sharing lists of approved DBEs and encouraging contractors to consider DBEs whenever there are contractible opportunities.

For FFY 2020 ORT included construction projects in the annual budget. Construction projects offer increased opportunities for DBE participation. ORT has, in previous year demonstrated exemption from the DBE goals because contracting opportunities were not available and the maximum Federal dollars spent on contractible services did not exceed $250,000.

ORT does not anticipate any foreseeable contractible opportunities beyond FFY 2020 on projects that would qualify for DBE race-conscious award according to the description of “race-conscious participation” found in 49 CFR Part 26.

Therefore, for FY 2020 ORT will employ race conscious methods in achieving its goals; with the understanding that construction project will include race/gender conscious goals to increase participation as those opportunities present themselves. ORT will submit an adjustment goal to FTA, should the need arise.

**RACE/GENDER-NEUTRAL AND RACE/GENDER CONSCIOUS DETERMINATION**

The next step is to forecast the race/gender-neutral and race/gender-conscious portion of the Step Two Adjusted Goal. As stated in 49 CFR Section 26.51, the maximum feasible portion of the overall goal must be met by using race/gender-neutral means of facilitating DBE participation. Since the historical statistics of ORT’s DBE participation has been to be exempt, ORT has established a Race Neutral goal of 0.00%. Therefore, ORT will employ a Race Conscious goal in conjunction with its contracting opportunity in FFY 2020.

The following considerations were made when determining the race/gender-neutral and race/gender conscious component of the goal setting process.

1) Historical opportunities for DBE participation and establishing a Race Neutral Goal
2) Current contracting opportuning of ORT’s construction of its Administration Facility for establishing a Race Conscious Goal

Appendix A - Tips for Goal-Setting in the Disadvantaged Business Enterprise (DBE) Program

The following guidance was provided by USDOT on December 22, 2014 with the following note: The General Counsel of the Department of Transportation has reviewed this document and has approved it as consistent with the language and intent of 49 C.F.R. part 26. This document should always be used in conjunction with the rule itself and other relevant, previously issued guidance such as the Questions and Answers About 49 CFR Part 26, found at http://osdbu.dot.gov. The document can be downloaded at http://www.osdbu.dot.gov/dbeprogram/tips.cfm

INTRODUCTION:

A number of DOT recipients have requested that (USDOT) develop additional written guidance on goal-setting and on how to determine what portion of their goal should be race/gender-neutral and what portion should be race/gender-conscious. This document is intended as a response to these requests. It incorporates the experience and best practices culled by DOT officials and recipients over the first year of implementation of the goal-setting portions of the new DBE rule (49 CFR Part 26). This is not intended to represent an exhaustive list of techniques for goal-setting. As always, one hallmark of the new DBE rule is flexibility and therefore we will, and you should, continue to be on the lookout for new and innovative goal-setting processes. Nor is this an exhaustive explication of all of the subjects related to goal-setting covered in the rule. This document is intended only to provide you with some additional guidance as you set goals. It should always be used in conjunction with the rule itself and other relevant, previously issued guidance such as the Questions and Answers About 49 CFR Part 26, found at http://osdbu.dot.gov.

I. IN GENERAL:

As we have stressed before, it is extremely important to include all of your calculations and assumptions in your submission. In other words, you must "show your work." When you submit your overall goals (and the race/gender-neutral and race/gender-conscious portions of your goals), it is important that we can follow your thinking process. Set out explicitly what your data sources were, what assumptions you made, how you calculated each step of the process, etc. Along these lines, you should make sure that your goal submission contains a clear description of your public participation process, a good summary of the comments received during that process and a summary of what if any changes were made based on those comments. Without this information, it is difficult for anyone to evaluate the actual goal you have selected. Goal submissions that are not accompanied by a written explanation of how the goal was derived will be sent back for additional explanation.
II. STEP ONE:

The most important thing to remember about Step One of the goal setting process is that you are attempting to come up with a measurement of the actual relative availability of DBEs to perform the types of contracts (both prime and sub) that you intend to let. To say this another way, you are trying to determine what percentage DBEs (or firms that could be certified as DBEs) represent of all firms that are ready, willing, and able to compete for DOT-assisted contracting. This percentage is calculated by dividing the number of DBEs ready, willing, and able to bid for the types of work you will fund this year, by the number of all firms (DBEs and non-DBEs) ready, willing, and able to bid for the types of work you will fund this year. That is, the number of DBEs will be in the numerator, and the number of all firms (DBEs and non-DBEs) will be in the denominator. This is true regardless of the type of data you are employing to measure the relative availability (e.g., bidders list, census data and DBE directory, disparity study, alternate method, etc.) In other words, whatever data is used, the ratio would be:

\[
\text{Step One Base Figure} = \frac{\text{Ready, willing, and able DBEs}}{\text{All firms ready, willing, and able (including DBEs and non-DBEs)}}
\]

To give a more specific example, if your work for the year involves both heavy construction and trucking, then: where there are 44 DBEs in heavy construction and 14 in trucking, and 300 firms (DBEs and non-DBEs together) in heavy construction and 150 firms (DBEs and non-DBEs together) in trucking, the ratio would look like this:

\[
\frac{44 \text{ DBEs in heavy construction} + 14 \text{ DBEs in trucking}}{300 \text{ firms in heavy construction} + 150 \text{ firms in trucking}} = \frac{58}{450} = 12.8\%
\]

The following points will assist you in calculating this percentage:

A. It is Not Acceptable to Use Past Participation as Your Step One Base Figure. This Step One Base Figure must not be simply a restatement of your past history of participation. Instead, it must represent an attempt to measure the availability of firms that are ready, willing, and able to compete, not just those who have won contracts in the past. For example, assume that after performing the calculations above, you come up with a Step One Base Figure of 12%. Assume also that in the past you have achieved 20% DBE participation. You may not simply substitute 20% for your Step One Base Figure. The appropriate method for the consideration of past participation is discussed below in the portions of this guidance dealing with Step Two of the goal setting process.

B. Use the Most Refined Data Available. When using census and other data organized by SIC codes or the NAICS codes (which will eventually replace the SIC system), try to use the most refined data available. This will help you to focus more precisely on the firms with which you or your prime contractors will actually be doing business and help you to avoid overestimating the number of firms in either the numerator or the denominator. For both SIC and NAICS, the data become more refined in the codes with higher numbers of digits. You should take steps to filter out businesses that are not relevant to your calculations where possible. For instance, if you are using a bidders list, and you are aware that
some of the firms on that list do not perform the type of work you will contract out, then exclude those firms from your calculation. If you are interested in further information on the NAICS system, you may want to visit the Census Bureau website www.census.gov and look under the header for business, and find the link for the NAICS system.

C. Look to Relevant Data Sources to Supplement Your DBE Directory. You should do everything you can to ensure that your goal setting process truly reflects the actual availability of ready, willing, and able DBEs in your local market area. Toward this end, if you are using your DBE Directory and census data in goal setting and you are concerned that your DBE Directory does not accurately reflect the number of potential DBEs in your area, you should seriously consider supplementing the number of firms in your DBE Directory for the purposes of goal-setting. This is especially important because the census data represent all firms in your area whether or not they are ready, willing and able to perform DOT-assisted contracts. If you do not take extra steps to ensure your list of DBEs and potential DBEs is accurate, you may seriously underestimate the actual relative availability of DBEs. You may do this by carefully examining lists of other DBEs and MBE/WBEs (Minority Business Enterprises/Women Business Enterprises) from other sources, such as other state or local transportation agencies (if the contracting opportunities are comparable), to determine whether they contain firms which should be considered ready, willing, and able DBEs. You should also examine your own data bases such as vendor data bases, bidder’s lists, pre-bid or pre-proposal conference attendance lists and outreach session attendance lists to determine whether these sources might reveal firms that should be included in your list of ready, willing, and able DBEs. Of course, you must be careful not to double count firms by including them on your list more than once. You also must remember that you are checking these other sources for the purpose of goal setting only. In order to actually be included in your DBE Directory, an otherwise eligible firm must take the additional steps of going through the certification process.

D. Explain How You Determined Your Local Market Area. Remember, the local market area is not necessarily the same as the political jurisdiction in which you are geographically located. Instead, your local market area is the area in which the substantial majority of the contractors and subcontractors with which you do business are located and the area in which you spend the substantial majority of your contracting dollars. It is important that you specify in your submission how you determined the boundaries of your local market area.

E. Ensure That Your Percentage Reflects an "Apples to Apples" Calculation. Whenever you are calculating ratios, make absolutely certain that the DBE firms in the numerator and denominator are as similar as possible to the DBEs and non-DBE firms in the denominator. For instance, if you include DBEs that do trucking in the numerator, make sure to include DBEs and non-DBEs that do trucking in the denominator. Likewise if you are using a bidders list, make certain that you use it for both your numerator and your denominator. In other words, if you are limiting your denominator to only those firms who have actually provided bids or quotes on past contracting opportunities, then be certain that your numerator is similarly limited to only those DBEs that have actually provided bids or quotes in the past. Finally, if you are using a bidders list, remember that it must include all DBE and non-DBE bidders and quoters whether they are prime or subcontractors and whether or not they were actually awarded a contract or a subcontract.
F. Wherever Possible, Use Weighting. Weighting can help ensure that your Step One Base Figure is as accurate as possible. While weighting is not required by the rule, it will make your goal calculation more accurate. For instance, if 90% of your contract dollars will be spent on heavy construction and 10% on trucking, you should weight your calculation of the relative availability of firms by the same percentages. In other words:

\[
\text{Step One Base Figure, } \frac{0.9(\text{# heavy construction DBEs}) + 0.1(\text{# trucking DBEs})}{\text{# all construction firms}} \times 100 = \text{weighted by type of work to be performed}
\]

If you were using the number of firms in the example presented in the opening paragraph of this section, the equation you would use would be:

\[
\left(\frac{9(44 \text{ heavy construction DBEs}) + 1(14 \text{ trucking DBEs})}{300 \text{ heavy construction firms}} \times 100\right) = \left(\frac{9(440) + 1(14)}{150 \text{ trucking firms}} \times 100\right) = 14.13
\]

In this example, therefore, your Step One Base Figure would be 14.13%. Of course, in your actual goal setting process you will likely have many more than just two categories of contractors. Keep in mind the comments in paragraph "B" above and remember that it is preferable to break down your work into the most refined categories of contractors available and then perform your weighting calculations for each of those categories.

G. Address the Effects of Decertifications in Step One. If you have, or will imminently, decertify a firm (e.g., for exceeding the Personal Net Worth (PNW) cap, or for other reasons) you should address the decertification of that firm in Step One of the process by excluding the firm from the numerator of the ratio, but not from the denominator. Likewise, if you know that a firm (DBE or non-DBE) has gone out of business or is no longer bidding for DOT-assisted contracts, then that firm should be excluded from both the numerator and the denominator of your ratio. Remember: in the vast majority of cases it is not appropriate to make adjustments based on the number of firms that have been decertified because of PNW or other reasons in Step Two of the goal setting process. Instead these adjustments should be made in Step One.

H. Do Not Make Adjustments Based Solely on Changes in the Amount of Federal Assistance You Expect to Receive. It is never appropriate to adjust your measurements of relative DBE availability, either in Step One or in Step Two, solely because the size of your contracting program will change in the next fiscal year. For example, if you assume that non-DBEs will be able to expand to compete for a large influx of new program dollars, you should make the same assumption about DBEs, absent specific evidence to the contrary. Of course, if the type of work for which you expect to contract changes dramatically, this may impact your goal regardless of changes in the level of funding you receive.

I. Feel Free to Suggest Other Ways to Calculate Availability. It is important to remember that the examples listed in the rule are just that - examples. You may propose alternative methods of calculating
Step One; just make sure that any such alternative operates to measure the actual relative availability of DBEs.

III. **STEP TWO:**

Step Two of the goal setting calculation process is intended to adjust your Step One Base Figure to make it as precise as possible. Under the rule, you must consider all evidence available in your jurisdiction to determine whether such an adjustment is necessary. In this context, there are several factors you must consider in making your Step Two adjustments if there are relevant and reliable data available. These factors include:

- past participation (the volume of work DBEs have performed in recent years) or other measure of demonstrated capacity;
- evidence from disparity studies conducted in your market area (including relevant studies commissioned by other contracting agencies in your market area);
- statistical disparities in the ability of DBEs to get financing, bonding and insurance;
- data on employment, self-employment, education and training, union apprenticeship programs; and
- any other data that would help to better measure the percentage of work that DBEs would be likely to obtain in the absence of discrimination.

Remember: while you must consider making adjustments to the base figure for all of the factors listed here, you are not required to make such an adjustment. If the evidence does not suggest such an adjustment is necessary, then no adjustment should be made. Moreover, if the evidence suggests that an adjustment is warranted, it is critically important to ensure that there is a rational relationship between the data you are using to make the adjustment and the actual numerical adjustment made. A clear explanation of which information sources you considered, how you made your Step Two adjustment - or why you determined that no adjustment was warranted - is a very important part of your overall submission.

**A. Adjustments Based on Past Participation**

A number of questions have arisen with respect to Step Two adjustments based on past participation. Below, we address the questions we have heard most frequently.

1. **What if, in the past, you were in noncompliance with the DBE regulations such that past levels of DBE participation present either an unfairly high or unfairly low picture of DBE capacity?** If, in the past, your DBE program was implemented in noncompliance with the regulations in place at the time, it may be inappropriate to make adjustments for past participation. If the noncompliance resulted in DBEs receiving either an unfairly high or unfairly low percentage of contracts, you should not make an adjustment for past participation based on any year in which the program was administered in noncompliance.

2. **What if the Step One Base Figure and past participation figure are very similar?** If your records suggest levels of past participation very similar to the number you calculated in Step One, then it is not
necessary to make any adjustment for past participation. For instance, assume that your Step One Base Figure is 21% and your past participation figure is 22.4%. In that case, you do not need to make an adjustment for past participation. Nevertheless, you must explicitly state that the reason you are not making an adjustment for past participation is that your past participation has been very similar to your Step One Base Figure.

3. Are de-certifications ever relevant in Step Two? As stated in Part II above, it is almost never appropriate to consider the decertification of DBEs in the Step Two adjustment process. There is one exception, however. De-certifications may constitute a reason not to make an adjustment based on past participation where the newly decertified firms account for all, or the overwhelming majority, of past DBE participation and you have good reason to believe that other DBE firms will not be ready, willing, and able to participate in the contracts you intend to let. For example, assume that your Step One Base Figure calculations establish that there are 15 DBE firms that perform the type of work for which you expect to contract this year and that two of those firms will imminently be decertified. Then, as stated above, you must exclude those two firms from the numerator of the ratio established in Step One. In addition, if those two firms were responsible for all or the overwhelming majority of your past participation, and there are no DBE firms poised to do similar types and volume of work, you should seriously consider not making an upward adjustment based on past participation or reducing the upward adjustment to reflect the fact that the firms in question are no longer available DBEs.

4. What if the types of contracts that you will let this year are very different from the types of contracts that you have let in the past? If the types of projects you are letting this year are very different from the types of projects let in recent years, you should not assume that your past rates of DBE participation are an accurate reflection of DBE capacity in the type of work you will perform this year. In this scenario, you should seriously consider not making an adjustment for past participation.

5. If you feel that an adjustment for past participation is necessary, how should you calculate the adjustment? If you feel that an adjustment based upon past participation is warranted, and you cannot determine any more precise way to make the adjustment, you may average the figure you obtained in Step One with a figure which represents your past participation. In utilizing this method, you will obtain a more precise outcome if you are able to include a number of years' worth of past participation.

a. Determining the Median Past Participation. The first step in adjusting your Step One Base Figure for past participation is to determine your "median" past participation percentages. Your goal setting process will be more accurate if you use the median (instead of the average or mean) of your past participation to make your adjustment because the process of determining the median excludes all outliers (abnormally high or abnormally low) past participation percentages. The following principles will help you calculate your median past participation percentage:

i. The median is the middle number in any group of numbers.

ii. The best way to determine the median is to first arrange the values in a list from low to high. For example, the numbers 3, 6, and 1 arranged from low to high is: 1, 3, 6.
iii. If you have an odd number of values from which to determine the median, just take the number which falls in the middle. For example, 3 is the median of 1, 3, and 6.

iv. If you have an even number of values, then you should average the two numbers which fall in the middle. For example, if you have the numbers 1, 3, 6 and 8, the median would be the average of 3 and 6 or 4.5.

v. If you only have two numbers, simply average those two numbers together.

b. Adjusting the Step One Base Figure with the Median Past Participation. With these principles in mind, you may calculate your median past participation percentage and use that figure to adjust your Step One Base Figure by taking the average of your median past participation figure and your Step One Base Figure. It is important that past participation not be given disproportionate weight and therefore, you should not simply average your Step One Base Figure with a whole list of past years' participation. Instead, you should average the Step One Base Figure with the median of your past years' participation rates.

c. Example. An example may be helpful. Assume that your past participation for the past four years has been 18%, 15%, 12% and 11% and that your Step One analysis resulted in a Step One Base Figure of 9%. In order to obtain a Step One Base Figure adjusted for past participation, you must do the following:

i. First, arrange your past participation values in order from low to high: 11%, 12%, 15%, 18%.

ii. Then take the middle percentage to obtain your median past participation percentage. If, as here, there are an even number of percentages the median is derived averaging the middle two values (12% and 15%). Obtain the average of 12% and 15% by adding them together and dividing by 2. In other words: 12% + 15% = 27%, 27% divided by 2 equals 13.5%. Therefore, 13.5% is your median past participation percentage.

iii. Finally, obtain a Step One Base Figure adjusted for past participation by taking the average of the Step One Base Figure and the median past participation. This average is obtained by adding together the Step One Base Figure (9%) and the median past participation percentage (13.5%) and dividing by 2. In other words, 9% + 13.5% = 22.5% divided by 2 = 11.25%. Therefore, 11.25% is your Step One Base Figure adjusted for past participation.

6. May you use only one year's worth of past participation to make an adjustment? In most cases, your result will be more accurate if you use the median of several years to make your past participation adjustment. However, if you feel that your goal will be more accurate if you use
only one year's worth of past participation you may do so as long as you fully explain your rationale. There is one caveat: if you use only one year's worth of past participation it must be a year in which your goals were set in compliance with Part 26.

7. Must you consider making an adjustment for past participation even if the result of the adjustment might be to decrease the overall goal? What if the adjustment will increase the overall goal? Yes, you must consider the advisability of making adjustments based on past participation regardless of whether or not the adjustment would result in increasing or decreasing the base figure derived in Step One.

8. Must you consider making an adjustment for past participation if this is the first time you have ever had a DBE program? No, an adjustment for past participation is not required if you are developing a DBE program for the first time and do not have any statistics on past DBE participation. Of course, if you do have statistics on past DBE participation you should consider making an adjustment.

B. Other Factors in Step Two

With respect to the other Step Two factors outlined in the rule, we have heard a number of questions. The following questions and answers may be of assistance to you as you consider Step Two of the goal setting process:

1. What additional sources of information should be considered in Step Two? In determining whether or not your base figure should be adjusted to account for the effects of past discrimination, you should consider consulting with the following organizations and institutions to determine whether they can direct you to information about past discrimination in public contracting; discrimination in private contracting; discrimination in credit, bonding or insurance; data on employment, self-employment, training or union apprenticeship programs; and/or data on firm formation:

   a. organizations serving or representing DBEs, minority-owned or women-owned businesses;
   b. state or local offices of procurement;
   c. federal, state or local offices responsible for enforcing civil rights laws;
   d. state or local offices responsible for minority or women's affairs;
   e. state or local offices dealing with business affairs, commerce or small businesses;
   f. state or local offices dealing with the oversight of banks and other credit institutions (sometimes this is the state treasurer's office);
   g. state or local labor offices; local labor organizations; institutions of higher education within your state;
   h. your state’s Office of the Attorney General (for information about lawsuits related to contracting or obtaining credit or bonding.)
If you choose to make adjustments to your base figure based upon any of this evidence of past discrimination, be certain that there is a clear and rational relationship between the evidence and the adjustment. This is often very difficult to do and depends entirely on the type of evidence you discover. You may want to contact a consultant or local institution of higher education (departments of economics or statistics) to assist you in making these types of adjustments.

Whether or not you make an adjustment based on a particular piece of evidence, make certain that you include a description of all of the evidence you considered with your submission.

2. What are "disparity studies" and why must I consider them? There is absolutely no requirement under the rule that you conduct your own disparity study. Nevertheless, if one has been conducted for your market area, you should consider the data the study contains. Many different types of studies have been referred to as "disparity studies," and the term is used broadly in the regulation to mean any type of study designed to investigate the existence of discrimination in contracting. Some disparity studies consist entirely of complex and lengthy statistical analyses. Some focus less on statistics and more on the collection and organization of anecdotal evidence of discrimination. Both types of studies should be considered in Step Two. Disparity studies vary widely in content and quality. Despite this, all or part of a disparity study relating to your local market area may provide a rich source of information for your goal setting process. If you are unsure about whether or not a disparity study relevant to your goal setting process has been conducted anywhere in your market area, consult with state and local offices of procurement and local government agencies responsible for enforcing civil rights laws and ask them if they know of any such studies. Remember, you may find relevant information in studies commissioned by other contracting agencies in your market area so be sure to examine any such studies for relevance to your goal setting process. If you choose to make an adjustment based upon a disparity study, you must carefully explain precisely what the disparity study evidence was and why the adjustment is warranted. In most cases it will be best to submit the disparity study (or all of the relevant portions of the study) with your proposed goal. If you obtain a disparity study conducted in your market area but, upon reading it, you determine that it is not relevant to your program or it is not reliable, you should not make adjustments based on the study. In this case, simply state your reason for not making the adjustment in your submission.

3. If you have reliable information about the characteristics of the firms available in your local market area, should you use those characteristics to make adjustments in Step Two? If you have accurate information about the characteristics of all the firms that are available to perform work for you such as their size, age, or past experience, you should consider making adjustments to your Step One Base Figure to account for any impact these factors might have on the capacity of firms to perform contracts for you. Of course, you will increasingly have information about some of these factors as you compile a bidders list in accordance with section 26.11. Again, it is important that any such adjustments be made with respect to both DBEs and non-DBEs in your market area. These types of adjustments usually involve quite difficult calculations and will likely involve using regression analysis. If you want to conduct these types of adjustments and do not
have the in-house capacity to do so, you must obtain the expertise necessary to make the adjustments correctly. You may want to consider obtaining assistance from a consultant or local institution of higher education (e.g., departments of economics or statistics).

4. What if there is no additional information available related to your goal setting process? If no disparity studies have been conducted in your market area, be sure to state that in your submission to your operating administration. Likewise, if you are unable to find the other types of evidence or data relative to Step Two, make certain you state this in your goal submission.

IV. CALCULATING THE RACE/GENDER-NEUTRAL AND RACE/GENDER-CONSCIOUS SPLIT:

The race/gender-neutral and race/gender-conscious division of the goal is an exceedingly important component of the goal-setting process. As is stated in section 26.51, you must meet the maximum feasible portion of your overall goal by using race/gender-neutral means of facilitating DBE participation. You must also carefully explain why you projected that you could achieve the level of race/gender-neutral participation you propose and the specific reasoning and data that support your conclusion. Many of you have asked for assistance in determining what factors to consider in projecting the portion of your overall goal that you will be able to meet through race/gender neutral means. The following considerations may be helpful:

A. Consider the Amount by Which You Exceeded Your Goals in the Past. The amount by which you exceeded your overall goals in past years can be a useful tool in helping you project the race/gender-neutral participation you can expect in the future. For example, suppose that your past year’s goal was 20%, but you obtained 30% DBE participation. The 10% difference between goal and achievement represents participation that went beyond what you told contractors they should do in order to meet the 20% goal. This 10% participation, then, was not made necessary by race/gender-conscious provisions of your program. It may be reasonable for you to assume, as you make your projected split between race/gender-neutral and race/gender-conscious measures for next year, that contractors will again be able to achieve 10% participation over and above the race/gender-conscious portion of your overall goal. If your overall goal were again 20%, this could be evidence supporting a decision for projecting 10% race/gender-neutral and 10% race/gender-conscious split for the coming year.

Your projected split will probably be more accurate if you use past participation data from more than one year. As noted in point #5 under "Adjustments Based on Past Participation," it is advisable to calculate the median of the past years' participation. For example, if your goal was 20% in each of the past three years, and your achievements were 21%, 22%, and 30%, the median amount by which you exceeded your goal was 2% (i.e., the median of 1%, 2% and 10%). You could then use this figure as evidence supporting a projection of 2% race/gender-neutral participation for the coming year. If you do use only one year's past participation for this purpose, be sure that the year you use was one in which you set your goal under the new Part 26 regulations.
B. Consider Past Participation by DBE Prime Contractors. If you obtained any of your past participation through the use of DBE primes, then those attainments should be considered race/gender-neutral and can be used as a basis for estimating a similar level of race/gender-neutral participation in the next program year. For instance, assume that your goal for last year was 20% and your achievement was 20%. If a portion of that 20% resulted from the participation of DBE primes - and thus from race/gender-neutral means - then it may be appropriate to assume that you will be able to achieve similar results through the race/gender-neutral participation of DBE primes in the future. Of course, in this instance it is especially important to ensure that you are comparing similar types of contracts. For example, if last year's participation by DBE primes occurred in a type of contracting in which there are many DBE primes, and this year you intend to do all of your work in industries in which there are few DBE primes, then it would be inappropriate to assume that you will replicate similar levels of participation by DBE primes.

C. Consider Past Participation by DBE Subcontractors on Contracts Without Goals. If you obtained any of your past participation through the use of DBE subcontractors on contracts without DBE goals, then those attainments should be considered race/gender-neutral and can be used as a basis for estimating a similar level of race/gender-neutral participation in the next program year. For instance, assume that your goal for last year was 20% and your achievement was 20%. If a portion of that 20% resulted from the participation of DBE subcontractors on contracts without goals - and thus from race/gender-neutral means - then it may be appropriate to assume that you will be able to achieve similar results in the future. Again, it is extremely important to ensure that you are comparing similar types of contracts. For example, if last year's participation by DBE primes occurred in a type of contracting in which there are many DBE subcontractors, and this year you intend to do all of your work in industries in which there are few DBE subcontractors, then it would be inappropriate to assume that you will replicate similar levels of participation by DBE subcontractors.

D. Consider MBE/WBE/DBE Participation Pursuant to Race/Gender-Neutral State or Local Programs. An excellent source of information about how much DBE participation is likely in the absence of race/gender-conscious measures may be found in similar state or local transportation construction projects that do not use any race/gender-conscious measures at all. For example, if projects funded with purely state/local funds involve no race/gender-conscious measures aimed at increasing the participation of DBEs and these projects achieve a median rate of 8% DBE participation, then you may project that you will achieve 8% DBE participation in your contracting without race/gender-conscious DBE goals. As above, your projection will be more accurate if you use the median of a number of past years.

E. Consider Concrete Plans to Implement New Race-Neutral Methods. If you have instituted new and comprehensive mechanisms aimed at obtaining additional DBE participation through race/gender-neutral means, these efforts might provide the basis for estimating a greater level of race/gender-neutral participation for the upcoming year. The key here is that any such efforts used to justify race/gender-neutral participation in the upcoming fiscal year must be:

1. new,
2. ready for immediate implementation,
3. described in detail, and
4. likely to result in additional DBE participation.

Evidence might include the establishment of a new, comprehensive mentor-protégée program aimed at providing assistance to small businesses; a detailed plan to break up larger projects into smaller subparts for which small businesses and DBEs will be more likely to be able to compete; or the institution of aggressive new efforts to provide bonding and credit to small companies, including DBEs, that have been unable to obtain it in the past.

F. Consider Past History of Inability to Achieve Goals. In determining how much of your goal you should meet through race/gender-neutral means, another factor to consider is a past history of inability to meet goals. If you have relied exclusively on race/gender-conscious measures in the past to meet your overall goals, but have not been able to achieve them, this may justify relying exclusively on race/gender-conscious means to meet your goal for the upcoming year. There are some caveats with respect to this particular factor in determining whether or not you will be likely to achieve a level playing field through race/gender-neutral means. If the goal you have set under Part 26 is significantly lower than your past goals, then your inability to meet your past goals is not a good justification for a completely race/gender-conscious goal under the new rule. However, if your goal under Part 23 was 20% and you only achieved 15% using entirely race/gender-conscious measures, that would be justification for using entirely race/gender-conscious measures only if your goal under the new Part 26 is approximately 20% or higher. This does not mean that you are prohibited from proposing to use race/gender-neutral means to meet all or part of your goal. However, if you have a history of being unable to achieve reasonable goals in the past, you will have to demonstrate some additional evidence for your contention that race/gender-neutral means will suffice to meet your goals in the future. Such evidence might include the establishment of a new, comprehensive mentor-protégée program aimed at providing assistance to small businesses or the institution of aggressive new efforts to provide bonding and credit to small companies that have been unable to obtain it in the past.

G. Avoid Double-Counting. It is important to note that some of the types of evidence for race/gender-neutral and race/gender-conscious projections outlined above cannot be used at the same time or it will result in overestimating past race/gender-neutral achievements. For instance, if you both exceeded your goals and used DBE primes in the same year - and thus the DBE primes contributed to you exceeding your goals - then you must be certain not to double count the extent to which the participation of DBE primes provides a basis for a race/gender-neutral projection in the next year. If you exceeded your goal by 10% and at the same time DBE primes accounted for 5% of your total DBE participation, then the total race/gender-neutral participation value for that year would be 10%, not 15%.

H. Monitor DBE Participation to Determine Whether You Need to Adjust Your Use of Race/Gender-Conscious Measures. Of course, once you have projected how much of your goal can be achieved through race/gender-neutral means, it will become critically important for you to
monitor DBE participation during the year to determine whether your projections were on target. Your projections are just that: projections. By monitoring actual DBE participation you will be able to determine what, if any, midyear corrections are needed in your mix of race/gender-conscious and race/gender-neutral measures used to achieve your goals. Remember: you must meet as much of your goal as possible through race/gender-neutral means. Therefore, if it appears that part way through the fiscal year that you are on track to exceed your goals, you should ratchet back your use of race/gender-conscious goals. Likewise, if you are using all, or mostly, race/gender-neutral measures and it appears that you will not meet your goal, you should consider instituting some race/gender-conscious measures or, at a minimum, more aggressively implementing your race/gender-neutral measures.

V. Contact Us If You Need Further Assistance.

Finally, as always, your operating administration is here to help. We understand that the new goal setting process can seem daunting at first, but we also know that you are up to the task. Never hesitate to call early and often for assistance while you are working on your goals. We will do everything we can to help you level the playing field and ensure an equal opportunity for all firms to play a role in building and maintaining our nation’s transportation infrastructure.
Appendix B – Local Market Area and Data Sources

The local market area is defined as the area the substantial majority of contracting dollars are spent and the area in which the substantial majority of the contractors and subcontractors are located. Since ORT’s funds for construction projects can be spent statewide, it is determined that ORT’s local market area is the entire state of Arkansas.

The following data sources were used in calculating the FFYs 2020-2022 DBE goal:

- The State of Arkansas Unified Disadvantaged Business Enterprise Directory
- U.S. Census 2015 County Business Patterns, Arkansas, Universe of Operating Establishments, by NAICS Code
- The State of Arkansas’ Department of Transportation’s List of Federally Assisted Transit and MPO Budgets for Projects Scheduled for FFYs 2018 - 2020
- The State of Arkansas’ Department of Transportation’s DBE Participation Reports from Prior Years
Appendix C – Written Comments on Proposed DBE Goal

No comments were received.
